

Central Washington County Water Supply Corporation signed a contract with HD Supply to purchase and install electronic water meters for all water customers. The meters will be installed by HD Supply's contractor Marshall Meter Services beginning about May 2.

Installations will be made Monday thru Friday between 8AM and 5PM. Installers will have uniform shirts and trucks with the Marshall Meter Services logo on them. They will usually be accompanied by a uniformed PGMS employee. If someone is home, they will be informed that the water service will be off until the installation is completed. The old meter will be removed, the new meter installed and checked for leaks. Estimated installation time is 20 minutes unless unusual situations arise, i.e. leaks, piping issues, etc. System-wide installation time is approximately two months.

After all 800+ electronic meters are installed and tested, we will provide further information on features of these new meters.

Meanwhile, please contact PGMS via the toll-free 1-866-643-3472 should you have any water questions.
